

## About

Another successful project with IBIX TRILOGY!

The football team of AEK in order to celebrate its new stadium "OPAP Arena" ordered the Hungarian sculptor Gabor Miklos Jokethe construction of an impressive sculpture to adorn the entrance of her stadium. The imposing Double-Headed Eagle is made entirely of stainless steel, it is now in New Philadelphia! Our company was asked to provide a solution for the final matte / glossy finish that would highlight the artist's work. IBIX TRILOGY was the perfect choice!

This specialized system combines sandblasting with water supply to avoid suspended dust but also the rotary Vortex HELIX® media cleaning system (rotating shot) which allows us to shoot even with 1bar.

The combination of absolute control with the use of 150-250 mesh glass and with low pressure gave the desired result.
